

About TecPac

Our dedicated team of professionals have experience in serving the sawmill industry over 20 years and are specialists in manufacturing, supply chain management and distribution. With an innovative approach, working proactively with our customers, we are often able to provide bespoke and optimal solutions which, combined with a level of service which can be fully relied upon, provides real value. We team up, under exclusive marketing agreements, with manufacturing partners who are committed

not only to highest safety, quality and continuous improvement practices but who also demonstrate appetite to invest in the most technically advanced and energy efficient machineries. Equally important, as it represents one of TecPac's core values, is to ensure that all partners throughout our supply chain practice and appreciate an awareness of the importance of compliance in the fields of Corporate Social Responsibility, sustainability programs, environmental impacts and ethical practices.

Lumber Wrap
Performance Packaging

Lumber Wrap

Maximum protection during transport, handling and storage

TecPac lumber wrap is a versatile, highly advanced material, designed to provide maximum protection for the outside storage of timber under all weather and temperature conditions including sunlight, rain, humidity and wind. Additionally our material has a high strength and resistance

to damage caused by abrasion during handling, storage and transportation. We recommend suitability of our products for kiln dried timber, engineered wood products, plywood, OSB, treated wood, crated goods as well as a variety of other speciality applications.

Full coverage PP woven fabric with high tear resistance, 2 sides coated, mainly White / Black. Other lamination colours are available upon request.

Weatherproof & strength advantages

The multi-layer woven material with high tear resistance and UV stabilised in all 3 layers provides safe long term outdoor storage. Made from virgin PP raw material and free from heavy metals. Our lumber wrap offers a high protection

to your products in all storage conditions. It is stronger than PE extruded film or PE woven fabric. Thanks to the increased UV resistance our fabric is ideal for a long-term outdoor storage.

Freeze

Heat

UV resistance

Weatherproof

Quality first

Controlled through each stage of production: tape extrusion, circular weaving, extrusion lamination, printing, re-rolling / C-folding, cutting / stitching and packing.

- ✓ Tensile and tear strengths
- ✓ Elongation
- ✓ UV resistance
- ✓ Water leak pressure
- ✓ Anti-slip properties
- ✓ Coating
- ✓ Ink adhesion
- ✓ Sizes and measurements

Available on rolls & tailor-made hoods

A range of technically advanced fabrics and laminates available from 70 to 100 gsm and in widths up to 390cm. Detailed specifications available on request.

Tailor-made hoods

The hoods are manufactured to suit exactly your requirements. The size, density, colour and options of the hoods can be adjusted to your requirements and demands.

Fabric on rolls

The fabric on rolls offers you most flexibility in your packaging unit. The width, density, colour and options of the fabric can be adjusted to your requirements and demands.
